# Absorbable surgical suture

- Drawer type packaging designed . Easy for take out the suture

Absorbable surgical synthetic sutures mainly made from Polyglycolic Acid(PGA), and the techniques of manufacturing are monomer-polymerization spin braid & sterilize. PGA suture is coated with polycaprolactone and calcium state. It's found to be inertia, nonantigenic and nonpyogenic. PGA suture elicits a minima tissue reaction, and can be supplied with or without needle.

Artificial synthesis has excellent compatibility and can be absorbed to body.

Catabolism outcome has bacteriostasis, which helps injury heal faster and without scar. Knotting smooth, keep tensile strength everlasting.

Unique line entity, braided structure and coating treatment, convenient and reliable

Absorption of PGA suture is essentially complete between 60 to 90 days.
